Android Studio

Express.js

SQL

PERSONAL PROJECTS

QcFirst

- Developed Full-Stack project.
- Designed and coded a student login and class registration system which includes the ability for professors to log in and create or drop courses using Javascript, Node.js, and MongoDB.

Search Engine

- Designed and implemented a solution in Java which reads HTML files and sorts the information in the documents to replicate a search engine. Uses many different OOP concepts and different data structures to make it as efficient as possible.

Grocery List Manager

- Created an application using Android Studio with Java to allow users to simplify grocery shopping by allowing multiple lists which keep all types of data persisted.
- Users can create new grocery list item presets which can be added to the lists and have the ability to edit their lists which includes updating item quantities, removing items, and more.

Tip Calculator

- Designed and created an application in Android Studio using Java to create an easier way for users to calculate the total amount of the tip, and how much a person should contribute to the tip if it is being split.
